

Abdullah Hilson

Full-Stack Engineer

+32 497 90 37 95
abdullah@hilson.net
Belgium

Experienced Full-Stack Engineer with 10+ years in web, mobile, and frontend development, specializing in React, TypeScript, and backend frameworks like Node.js and Django. Proven ability to lead teams, ship scalable SaaS products, and improve engineering workflows under tight deadlines.

Experience

Frontend Team Lead

[btr.tech](#) · Kuwait/Remote

Nov 2021 - Present - 3 yrs, 8 mos

Led the frontend and mobile development for three core SAAS products in logistics and e-commerce: 'Shopraha' (automated grocery), 'Rover' (delivery fleet management), and 'Halo' (warehouse management). Drove the architectural vision for mobile applications and co-led the successful implementation of a Turborepo monorepo to unify development across all dashboards.

- Managed a mobile team of 4 in developing a React Native e-commerce app, establishing the foundational architecture and continuous deployment pipelines.
- Mentored a team of 5 developers, implementing rigorous code reviews and SCRUM methodologies that increased deployment frequency and reduced critical bugs in production.
- Co-led the Turborepo monorepo initiative, delivering a shared Ant Design component library used by four product dashboards, eliminating ~45% of duplicated UI code in listing pages and accelerating feature delivery.
- Improved monorepo dashboards build time by over 70% by migrating from Next.js to Vite and adopting Bun as the package manager, drastically accelerating continuous integration (CI) and local feedback loops.
- Led the full lifecycle development of two complex mobile applications for logistics and warehouse management using Capacitor and Tailwind CSS.
- Established and enforced a robust testing culture, implementing full E2E testing suites with Playwright and comprehensive integration tests for critical mobile applications.
- Spearheaded development of 'Rover', a complete fleet management solution, delivering the driver's mobile app and contributing significantly to the admin dashboard.
- Actively partnered with the product manager to streamline features to enhance maintainability, and prioritize high-impact work to accelerate delivery.
- Authored and maintained comprehensive developer documentation, standardizing contribution guidelines and best practices to streamline onboarding and ensure code consistency.
- Optimized the 'Shopraha' application by debugging performance bottlenecks, which enabled server downscaling while supporting an increased user load.

Senior Software Engineer

[Andela](#) · US/Remote

Nov 2020 - Nov 2021 - 1 yr

Contributed as a senior engineer within a global talent network, developing robust dashboards with React and TypeScript, and building serverless, RESTful APIs using Python and AWS CDK. Focused on delivering high-quality, tested code for various client projects.

- Engineered and maintained robust dashboards with detailed documentation, using React, TypeScript, and GraphQL, ensuring comprehensive test coverage with both unit tests and integration tests.
- Designed and implemented scalable, secure serverless APIs using Python, AWS Lambda, and CDK.
- Analyzed requirements and provided expert solutions; offered valuable advice to leaders and designers.
- Contributed to internal knowledge-sharing by documenting API endpoints, architectural decisions, and setup guides.

Senior Mobile Engineer

[Kenz'up](#) · Morocco/Remote

Aug 2020 - Jun 2021 - 10 mos

Led a React Native application to its production launch as a key mobile engineer. Resolved critical bugs across the full stack (mobile and Django backend) through intensive debugging, integrated new features and designs, and mentored junior developers to enhance team capabilities.

AWS CDK

- Led the React Native app to a successful production launch, achieving over 5 million downloads and a 4.5-star rating from 35.1k reviews while resolving critical bugs across the full stack.
- Integrated complex features and new designs in the mobile app.
- Mentored and advised 2 junior developers, elevating their skills to independently deliver complex features and contributing to the app's success.
- Significantly reduced manual testing time by developing an internal Express.js tool for barcode generation, accelerating development and QA cycles.
- Introduced and maintained a knowledge base for the mobile team, documenting complex components, API integrations, and common bug fixes.

Full-Stack Engineer

Jan 2019 - Jan 2020 - 1 yr

Obytes · Emirates/Remote

Transitioned to a full-stack role, taking ownership of backend development with Python and Django while continuing frontend work. Key contributions include implementing a full-featured subscription and payment system and improving overall backend code quality through refactoring and best practices.

- Engineered backend systems using Python, Django, and GraphQL, implementing comprehensive unit and integration tests.
- Developed new frontend features using React.js
- Implemented a subscription system with recurring payments using PayPal, TAP, and wire payments (backend/frontend)
- Enhanced backend code quality through refactoring and best practices
- Offered guidance to a team of 9 developers through targeted code reviews, which reduced code complexity and significantly improved backend maintainability.

Frontend Engineer

Mar 2017 - Dec 2018 - 1 yr, 9 mos

Obytes · Emirates/Remote

As a frontend specialist, I built and optimized user interfaces with responsive design using React, Redux, and Gatsby.js. My work involved integrating complex features like social logins and video players, significantly improving application performance and user engagement.

- Developed and scaled a learning platform to 400,000 users, which managed 650,000 learning path completions and 5,000 project submissions.
- Developed and optimized user interfaces using React.js, Redux, and Apollo Client, resulting in a more responsive and engaging user experience.
- Executed a major performance optimization by migrating to Gatsby.js, cutting load time by 80% and boosting user experience.
- Integrated social login and registration, video players, code editors, and logic for code challenges and quizzes
- Mentored 3 frontend team members and newcomers, fostering a collaborative environment that proved instrumental in scaling the learning platform to 400,000 users and reduced load times by 80%.

Full-Stack Web & Mobile Developer

May 2015 - Jul 2020 - 5 yrs, 2 mos

Independent Freelancer · Remote

Provided freelance web and mobile development services for a variety of clients on a part-time basis. Delivered custom solutions ranging from WordPress websites to complex single-page and mobile applications using modern stacks.

- Developed custom WordPress websites for small businesses.
- Built frontend applications using React, GatsbyJS, and Next.js.
- Engineered backend services with Ruby on Rails, Node.js, and Django.
- Created cross-platform mobile apps with React Native and Ionic.
